

What's the buzz about ??

Beekeeping 101 Workshop

Just think of a world without beans, tomatoes, onions and carrots, not to mention the hundreds of other vegetables, oilseeds and fruits that are dependent upon bees for pollination. One out of every three bites of food we eat has been pollinated by a bee; they are responsible for about 35% of all food production globally. Educating the public about the importance of bees and encouraging more people to raise bees is one way to sustain the bee population and to share the fun hobby with others!

The **Centre County Beekeepers Association** is hosting a beginning beekeeping workshop led by members of the group, with information relevant to anyone interested in keeping bees. This entry level class is beneficial whether you already have a few hives or are just thinking about getting started in beekeeping. Topics and demonstrations to be covered include:

**Beekeeping equipment
Protective Gear
Swarming**

**Seasonal Hive
Management**

**Identify the Queen, Drone and Worker
Bee Diseases and Pests
Hive Products**

All of these topics and more will be covered in this one day training course. Trial and error can be an expensive teacher. Take advantage of the experience of local beekeepers to improve your chances of successful beekeeping.

Beekeeping 101

Saturday, March 2, 2019

Time: 10:00 a.m. to 3:00 p.m.
